

ESTABLISHED IN 1999 in Lausanne, Switzerland, Adeli Interior Architecture & Partners provides clients with a creative approach to developing exclusive interior architecture projects. The company's designs develop a visual identity adapted perfectly to the culture and practices of each client.

Adeli's award-winning renovation of Villa Dubochet 19 was a mammoth project combining respect for heritage, architecture and contemporary comfort. As part of a prestigious ensemble of late 19th century houses in Clarens, Montreux, the work involved expanding the living space and the addition of modern amenities and technology in line with a 21st century lifestyle.

Due to the protected nature of the villa, the extension could only be carried out at

basement level but has created two beautiful additional bedrooms. The upper floor consists of a living room, kitchen, dining room and office, while the first floor is entirely devoted to the luxurious master suite. An existing attic has been made into a painting workshop with the basement area now containing service areas and amenities. These include a wine cellar, home theatre equipped with the latest technology and storage space.

The lower ground floor now houses a state-of-the-art wellness area complete with a Jacuzzi, Turkish bath and other relaxation equipment. Throughout this project, the architectural identity of the building including its façades, roofs, openings and balconies has been scrupulously restored to its original character by Adeli.
